Ref. PME/036/14

To. *The President of the 13th Meeting of the State Parties
H.E. Mr. Boudejema Delmi, Ambassador and Permanent Representative
of Algeria to the United Nations Office and other International
Organizations,
Geneva*

*The Permanent Mission of the State of Eritrea presents its compliments and has
the honor to enclose herewith, the two documents of the Eritrean Demining
Authority.*

Please accept the assurances of our highest consideration.

Geneva, 23 January 2014

FOR Bereket Woldeyohannes
Chargé d'Affaires a.i.

STATE OF ERITREA
ERITREAN DEMINING AUTHORITY

**REQUEST FOR EXTENSION OF THE DEADLINE FOR FULFILLMENT OF OBLIGATIONS UNDER
ARTICLE 5 OF THE CONVENTION ON THE PROHIBITION OF THE USE, STOCKPILING,
PRODUCTION AND TRANSFER OF ANTI-PERSONNEL MINES AND ON THEIR DESTRUCTION**

February 2015 to February 2020

POINT OF CONTACT:

Habtom Seghid
Deputy General Manager
Eritrean Demining Authority

A. Landmines and Explosive Remnants of War Challenges in Eritrea: A Historical Context

1. Eritrea has been a scene for major conflicts for over half a century leaving it with a massive legacy of Landmines and Explosive Remnants of War (ERW). It is one of the hardest hit countries in Africa by this scourge. The war between British and Italians during World War II left behind a significant amount of ERW. Following the War, and contrary to the wishes of the Eritrean people, the United Nations decided to annex Eritrea to Ethiopia under a federal arrangement. When Ethiopia abrogated the federation in 1962, the Eritrean commenced its struggle for self-determination which culminated in independence in 1993. The legacy of the three decade war of independence, however, was a huge nationwide landmine and ERW contamination. In 1998, Ethiopia waged a war of aggression against sovereign Eritrean territories sparking a two year border conflict. During the war massive defensive landmines were planted by the Eritrean defense forces, notwithstanding to the landmines that the Ethiopian armies planted in the Eritrean territories that they have occupied. Inevitably the subsequent wars have left the country with atrocious threat and contaminations of Landmines and ERW.

2. The effects of landmines and ERW had noticeably gone beyond killing and maiming of people. Its impact on the social and economic progress of the nation cannot be understated. The vast majority of the mine impacted communities in Eritrea depend on farming and herding for their livelihoods. The widely scattered landmines and ERW have impeded farmers from cultivating their land and herders from freely moving their herds in search of better grazing land and water. Moreover, the negative impact of landmines and ERW on construction and other development projects was noticeable especially in Southern and Gash-Barka Regions.

3. Faced with this tantamount challenge, the Eritrean Government commenced a nationwide landmine and ERW clearing efforts soon after independence as well as after the conclusion of the Eritrea Ethiopia border conflict in 2000. This massive landmine clearance of the affected areas was undertaken by Eritrean defense forces engineering units and a preparations for humanitarian mine action became operational in 2001. It is important noting that in the aftermath of the border conflict, there was an increase in Humanitarian Mine Action activities organized by National Mine Action and a number of foreign organizations, such as, Danish Church Aid, Danish Demining Group, HALO Trust, RONCO, Mine Awareness Trust and UNMEE Contingencies using a wealth of mine clearance tools including manual, mechanical, and dogs engaged in mine clearance and ERW destruction operations. However, judged against the huge capacity in terms of finance, technology and personnel the results achieved was not satisfactory. This led to the overall restructuring of the mine action activities including the phasing out of the contracts of the foreign organizations as well as the suspension of UNDP's Mine Action Capacity Building Program.

B. Eritrea Accession to Mine Ban Treaty and efforts to meet its obligations under the Treaty

4. Eritrea acceded to the Mine Ban Treaty on August 27 2011. As part of a fulfillment to its obligation under the Treaty, a national mine action was established in 2002. The establishing

proclamation (123/2002) stipulated the responsibilities of the Eritrean Demining Authority (EDA) as: coordinating and managing Mine Action, clearing landmine and returning areas to productive use, educating Eritrean civilian on the dangers of mines and on ways to identify and report them; clear mined areas to facilitate the repatriation of internally displaced persons and refugees and integrate mine action into the national development plans.

5.The first nationwide effort to identify the Landmine and UXO contamination was through a Landmine Impact Survey (LIS) conducted between March 2002 and June 2004. The survey identified 914 Suspected Hazard Areas (SHAs) encompassing 129 sq.kms nationwide and affecting 411 communities. It was also identified that 751 of the SHAs as contaminated by AP mines, a mix of AP and AT mines or a mix of AP mines, AT mines and ERW. The contaminated areas spread on the six administrative regions as follow: 203 in Anseba, 112 in Southern, 12 in Southern Red Sea, 107 in Gash-Barka, 72 in Central, and 246 in Northern Red Sea.

6.With limited support from the UNDP, the EDA resumed demining program that included activities such as: mapping, marking of affected areas, Mine Risk Education to the former IDPs and Mine Clearance activities on a limited scale more focused in the IDPs/Expellees return/resettlement areas. In the absence of external assistance, the EDA has been employing cheapest and relatively effective methods easily applicable to carry out mine clearing operations with the limited resources and capacity that is locally available.

7.Demining is primarily carried out by the engineering units of the Eritrean defense forces. Trained and certified deminers with Standard Operating Procedures among those teams are tasks under the supervision and quality assurances of the EDA. The EDA through its Operations and QA/QC departments carries the responsibility of all aspects of quality assurance and quality control standards according to the National Mine Action Standard (SOP). All individuals deployed or involved in the humanitarian mine clearing task are trained and aware to be responsible for quality assurance. Quality checks are included at all levels of mine clearance task. The site supervisor ensures that all aspects of quality assurances at all levels, he/she ensures the suitability of demining methods to the site, as well as monitors the result and adjusts the clearance methods.

8.The EDA conducts its mine action activities in close partnership with affected communities and local administration. The widely spread community volunteers continue to perform important task of educating of landmine and ERW risks and monitoring incidents.

C. Article 5 implementation efforts until the submission of the second phase extension request date (2011 to 2013)

9.It is the strategic aspiration of the Government of Eritrea to have a mine free state and have been tackling to overcome the Article 5 challenges. However, due to some flaws in the initial conduct of the Survey including overlapped records, the massiveness of the contaminated areas, lack of adequate funding and shortage of operational equipments continue to impede Eritrea from fulfilling its mine clearance commitment within ten years as stipulated in Article 5 of the convention. In 2011, Eritrea requested a first phase 3 years period extension request with the aim to conduct resurvey by non-technical method to properly identify the remaining challenged and

develop an appropriate plan for its second phase request to fulfill Article 5 obligations of the convention. It drafted plan for the implementation of the Article 5 of the convention within its transitional extension period (2011-2013), and was granted a three year extension period (February 2012-February 2015).

10. Accordingly, the Eritrean mine action authority drafted 5 years national strategic plan from 2011–2015. This plan was based on the review and updating of the 2005-2009 strategic objectives with total budget assessment of 8.5 million USD, expecting partial coverage of it (4.5 million USD) by external support, to carry out the following objectives: (a) make area reduction by at least 50% conducting resurvey until 2014; (b) continue clearance of land mines and ERW according to the social impact priorities; and, (c) continue to conduct Mine Risk Education activities to sensitize communities to reduce new casualties until full clearance is assured. To achieve these, the EDA proposed to deploy demining teams in the impacted location of:

- Anseba—Halhal, Keren, Haboro, Geleb, Hagaz and Kerkebet
- Northern Red Sea—Karora, Mahmimet, Afabet and Shieb

11. During the transitional extension request, a non-technical survey was proposed with the aim for quick area reduction. Such a survey would enable reach correct assessment of the remaining contamination areas which in turn could be crucial at assessing the operational time frame. In preparing the proposal for the non-technical survey task, it has been assumed that a big area reduction can be done from the LIS data record which was executed from 2002 to 2004. This assumption was based on estimation from observations on the ground that although the LIS served as a bench mark for the humanitarian mine action progress, it had so many overlaps in its mined area records. Other than this, some areas were cleared by the military engineers very early after the conflicts but not cancelled. Yet until recently because non-technical survey verification and assurance was needed to fulfill completion protocols for cancellation. Such assumption is asserted timely by the fact that huge portion of the operational achievements is attained by non technical survey task.

12. Accordingly, a non-technical survey team was deployed in the following sub-regions:

- Anseba Region—Hagaz, Keren, Halhal, Geleb, Elaberid, Hamelmalo, Asmat and Aditekelezan
- Northern Red Sea Region—Karora, Afabet, Shieb, Foro and Massawa
- Southern Red Sea Region—Central Denkalia, Southern Dankalia, Assab, and Araata
- Central Region—Serejeka, Gala Nefhi and Berik

13. The survey teams conducted their task in close collaboration with relevant partners including—Mine Risk Education teams, the community volunteers, regional administration offices, relevant military engineers—to gather information on the LIS recorded mined areas. EDA teams collected information based on a pre-prepared questionnaire which includes questions such as: After military demining since 20 years had there been any incident of landmine in the location? Are the communities using the location for their daily purposes? If you believe the previously LIS recorded area is having partial impact only, where does it lie? When teams got satisfactory information from informants, the EDA declared an area mine free and

cancelled from the impact list. After full clearance or NTS cancellation is justified, the EDA contacts the regional and sub-regional administrators for the declaration of the cleared areas and safe usage of the land.

14. In the transitional extension request of March 2011, Eritrea has reported that out of 751 mine area identifies as baseline by the LIS 79 area covering an area of 30,852,678 square meters had been cleared. Hence, at the time of submitting its initial extension request, referring the LIS records Eritrea reported a total of 672 areas measuring a total of about 98 million square meters remaining. Furthermore, in the past three years a total of 287 areas measuring a total of 73,702,463 square meters have been cleared and cancelled by NTS. Out of this 287 areas, 157 mined areas covering total area of about 33.5 million square meters is accomplished in 2013 and almost all this progress is achieved by non technical survey method. Therefore at this stage, total number of areas addressed since the LIS are 366 covering 104,555,141 square meters and the remaining impacted number of mined areas is supposed to be 385 with total area coverage of about 24.5 million square meters.

15. While too much progress has been made in terms of clearing impact areas identified in the LIS, there has been 49 new mined areas discovered in the five regions of the country, namely:

- Gash Barka Region: Agordat and Shambuko.
- Central Region: Serejeka, South-east and Berik,
- Southern Region: Areza, Debarwa, Dekemhare, Segeneiti, and Senafe.
- Anseba Region: Keren, Hamelmalo, Elabered, Halhal and Habero.
- Northern Red Sea Region: Afabet and Nakfa.

16. This new discovery of mined locations covers total area of about 9 million square meters. Thus Eritrea remains 434 mined area covering total area of about 33.5 million square meters which needs to be addressed by clearance and may be small amount including the new discovered mined areas need NTS. Detailed progress of our task activities made is tabulated here under:

Clearance Progress

| Region | Type of Landmines & ERW destroyed | | | Number of Cleared mined areas | Cleared areas in sq.mts |
|------------------|-----------------------------------|----|-----|-------------------------------|-------------------------|
| | AP | AT | ERW | | |
| Anseba | 1012 | 25 | 995 | 33 | 3,227,860 |
| Gash Barka | 11 | 7 | 283 | 2 | 1,210/458 |
| Southern | 7 | - | 180 | 1 | 231,432 |
| Northern Red Sea | 34 | 2 | 760 | 2 | 998,218 |

| | | | | | |
|--------------|-------------|-----------|-------------|-----------|------------------|
| Total | 1064 | 34 | 2218 | 38 | 5,667,968 |
|--------------|-------------|-----------|-------------|-----------|------------------|

Non -Technical Survey Progress

| Region | Number areas cancelled by Non-tech survey | Amount cancelled by NTS in Sq.mtrs |
|------------------|--|---|
| Southern | 48 | 10,205,061 |
| Southern Red Sea | 4 | 10,833,676 |
| Northern Red Sea | 69 | 16015195 |
| Central | 47 | 8,976,385 |
| Gash Barka | 50 | 12,546,260 |
| Anseba | 31 | 8,748,784 |
| Total | 249 | 67,325,361 |

Total accomplished progress and remaining areas as of 31 December 2013

| Region | Number of NTS. cancel. | NTS cancel. in sq.mts | Number Area cleared | Area cleared in sq. mtrs | Number of New discov. | New discoveries in sq.mtrs | Area remaining | Remaining in sq.mts |
|------------------|------------------------|-----------------------|---------------------|--------------------------|-----------------------|----------------------------|----------------|---------------------|
| Gash Barka | 48 | 10,205,061 | 2 | 1,210,458 | 22 | 2,411,819 | 63 | 6,252,951 |
| Anseba | 4 | 10,833,676 | 33 | 3,227,860 | 10 | 3,016,676 | 144 | 10,230,940 |
| Central | 69 | 16015195 | - | - | 3 | 280,913 | 24 | 2,423,325 |
| Southern | 47 | 8,976,385 | 1 | 231,432 | 6 | 1,252,255 | 29 | 3,894,036 |
| Northern Red Sea | 50 | 12,546,260 | 2 | 998,218 | 8 | 2,026,296 | 166 | 9,462,537 |
| Southern Red Sea | 31 | 8,748,784 | | | - | - | 8 | 1,169,029 |
| Total | 249 | 67,325,361 | 38 | 5,667,968 | 49 | 8,987,959 | 434 | 33,432,818 |

D. Socio-Economic Impact of landmines and its impact after demining

17. The largest impact of landmines in Eritrea is on rural communities where landmines and unexploded ordnances have been blocking access to pasture and agricultural land. All communities that are impacted by landmines and Explosive Remnants of War (ERW) live in fear from the prospect of death and injury. It puts a huge psychological burden on people. The LIS clearly shows that most accidents occur because people, in particular children, follow their animals that stray onto minefield which often offer rich vegetation for grazing. This pattern is

supported by the fact that pastureland blockages were present in 399 of the 481 impacted communities.

18. Landmines are causing death or injury of the most productive member of society with consequent loss of productivity, disruption of family life and stresses. On the basis of the community visits for many impacted communities, landmine contamination is the cause of food insecurity. After clearance was justified since the start of broad national demining program, a number of projects, mainly infrastructure projects such as roads, schools, clinics, dams e.tc. began to be constructed broadly and throughout the country where a lot of such projects are accomplished until now and further progress for such projects still ongoing in the clearance completion certified areas of the country. In prioritizing of areas to be addressed, it is always taken into accounts that after completion of clearance, the weight of use of the clearance results is expected to show significant progress for the benefit and safety of the community and the national development plans as well.

19. About the recent progress carried out during the transitional extension period, it is too early to see and report the full advantageous result or benefit of converting the mine clearance justified areas for agricultural development products because as indicated in our reports, huge portion of the task is accomplished by non technical survey method and most of it late this year. However, within the three years of our transitional extension period, farmers have used their agricultural fields and started to harvest their crops safely. Apart from this, some locations are used for green areas to the community under the campaign of social participation for forestation. As an example for this activity, Keren and Hamelmalo sub-regions in the Anseba Region.

Victim Aggregate during the transitional extension period

| Region | Type of Incident | Males | | Females | | Total |
|----------------------|-------------------------|-----------------|-----------------|-----------------|-----------------|--------------|
| | | Under 18 | Above 18 | Under 18 | Above 18 | |
| Central | Killed | - | - | - | - | - |
| | Injured | 3 | - | 1 | - | 4 |
| Southern | Killed | - | - | - | - | - |
| | Injured | 4 | 1 | 1 | 1 | 7 |
| Anseba | Killed | - | - | - | - | - |
| | Injured | 4 | - | 2 | - | 6 |
| Northern Red Sea | Killed | 3 | 1 | 1 | - | 5 |
| | Injured | 8 | 1 | 5 | - | 14 |
| Gash Barka | Killed | 3 | 1 | - | - | 4 |
| | Injured | 7 | 4 | 1 | - | 12 |
| Total Killed | | | | | | 9 |
| Total Injured | | | | | | 43 |
| Total Victims | | = | | | | 52 |

N.B. All victims are civilians, most of them injured or killed when herding or walking for their daily activities.

E. Eritrea remaining landmine challenge and its detailed work plan for the progress of the requested extension Period.

In the course of five years requested in this extension, the Eritrean Demining authority will continue with resurvey and mine clearance operations. However, owing to the multifaceted challenges that Eritrea faces in the area of landmines and the unfortunate discovery of new contaminated areas, the Government of State of Eritrea requests Five Year Extension Period (February 2015 to February 2020) to fulfill its obligation under Article 5.

to accomplish resurvey task so that to identify the lean actual mined area needing thorough demining operations

20. EDA will attempt to conduct resurvey in the remaining **434** mined areas which cover **33.5** million square meters with the available national human and financial resources. It also plans to deploy at least five demining teams, which could be increased if adequate financial and logistical support is found. To achieve better results EDA is in a midst of organizational restructuring at all levels. At the present, EDA's human capacity is as follow:

- 5 demining teams with each demining team having 64 person = 320.
- 3 EOD teams with each team having 5 person = 15
- 2 Survey teams with each team having 5 person = 10
- 2 Q/A teams with one team having 5 person = 10
- 10 MRE teams with one team having 4 person = 40
- 150 community volunteers

21. It has been noted during the transitional extension period, remarkable progress is achieved using the non-technical survey method. Therefore, in addition to what will be accomplished by the given mine clearance plan drafted for five years, the EDA will also to proceed with resurveys plan (Technical and non-technical) to make further area reduction on the remaining countrywide impacted areas including the new discovered mined areas.

22. While resurveying will be conducted in impact areas all over the country, as per existing national priorities, resurvey teams will be deployed in primarily in Anseba Region (Hagaz, Keren, Halhal, Geleb, Elaberid, Hamelmalo, Asmat, Kerkebet, Habero and Aditekelezan) and Central Region (Serejeka, Gala Nefhi and Berik)

23. Past experience has shown each demining team will be deployed to conduct demining operations according to the priority areas with assumed clearance rate of **384000** square meters per team per year and **1,920,000** square meters per 5 teams per year. Therefore the total clearance progress planned for the 5 teams in 5 years period is calculated to be **15,360,000** sq.mtrs. This figure is the maximum attainable efficiency assumed under regular and fulfilled operational conditions but may be ambitious if taking into account the inevitable collaboration (working together) of the demining teams with the re-survey teams to accomplish the outstanding and priority task which is to make optimal area reduction.

24. Following an updated training, the demining teams are expected to be deployed in the following regions:

- Anseba Region: Hagaz, Keren, Halhal, Geleb, Elaberid, Hamelmalo, Asmat, Kerkebet, Habero and Aditekelezan
- Northern Red Sea Region: Karora, Mahmimet, Afabet, Shieb, Foro and Massawa
- Central Region: Serejeka, Gala Nefhi and Berik.

25. The overall total budget required for the five years extension (2015-2020) 5 years plan is estimated **7,166,800** US Dollars, and can be summarized as follow: (Please see detailed budget in the annex table.)

| | <u>Budget in USD</u> |
|--|-----------------------------|
| Salary Budget for Five Demining Teams* | 3,975,000.00 |
| DSA Budget for Five Demining Teams* | 2,253,000.00 |
| Demining Equipments | 646,000.00 |
| Communication and Camp Equipment | 62,000.00 |
| Personal, Electrical and Marking equipment | 173,000.00 |
| Cooking tools and Sundries equipments | 11,600.00 |
| EOD and First Aid equipments | 46,200.00 |
| Total | 7,166,800.00 |

26. Having proposed this projection, the State of Eritrea through the EDA will relentlessly continue its effort using, with utmost efficiency, of the human, material and financial resources existing and that it might acquire to expedite mine clearance program and fulfill its obligations before the deadline proposed in this extension.

None Technical Survey Progress After Extension Request

| Ser | Zoba | Sub Zoba | Community | Longitude | Latitude | Size Of Area Sq.m |
